The U.S. patents are cited to complete the record.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Volz et al. reference.

The Volz et al. Reference having an effective date of January 1, 1997 teaches applicant's Kavain as having therapeutic use in patients (see TX, line 8) and shows oral administration at 270-330mg/day for 22/weeks (TX lines 8-20).

The instant claims are directed to preventing a condition which would read on a normal host. Therefore, one skilled in this art would find ample motivation from the prior art supra to employ a known pharmaceutical kavain for preventing a condition with a reasonable expectation that said compound would be effective. Moreover, in the 24 weeks of treatment there would be a time wherein the patient was ^vcared and still received the pharmaceutical.

Changing the mammal to a "mammal in need thereof" would overcome this rejection.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by the Hapka et al. reference.

The Hapka et al reference teaches toxicological studies of kavain in mammals (see ST line 3 and RN, line 1) clearly, toxicity studies would be administering to a normal mammal. Changing the mammal to a "mammal in need thereof" would overcome this rejection.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 3-6 of copending Application No. 09/ 792,898. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims are directed applicant's compound for chemopreventing cancer while the parent application is directed to a reduced scope of the compounds for chemopreventing cancer.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
